Likes: + Undemanding + Keyboard configuration + Natural sound + Custom instrument maps + Change keyboard layout Dislikes: - No sounds are generated by default This is the gateway to the app. It is designed to be easy to use, with full documentation and clear displays. Available in two languages (English & German). Supported Piano music formats: Quantize/Scale/Transpose/Reverse Note Both pianos & Harpsichords Views: Has some bugs, but is still a good starting app. HS-Piano is a very helpful app to have around for practicing and even producing pieces of music (like weddings). It won't let you play the entire keyboard, but it does go from piano to organ. As for keeping track of the different settings for HS-Piano, I just have opened up the default piano and keyboard configs in a new window and stored them locally. My virtual piano is modeled after the best key action piano for better accuracy on a budget! What is so good about it? It's extremely lightweight; I have to say that it's possible to run

However, it has not been updated for a long time and it may not meet the current requirements of some users. A: JWS Soft Keyboard is a very good virtual keyboard for some very simple music instruments as it can read MIDI. You can hit keys on your keyboard, and then in the Soft Keyboard, the app will tap the corresponding note(s) on the keyboard. This makes a low-polymed drum kit, for example. This works best when you have (for example) the piano key in the right hand, and you want to tap it to produce a high pitched sound. You could also use the F keys to produce other notes, or the ctrl key to change your midi instruments. The app is a.msi installer, not a.deb. You need to have.NET installed on your computer, otherwise you will get a prompt that says "You need a runtime to complete this installation" I use it myself in conjunction with GarageBand to create drum tracks and use the Soft Keyboard as a joystick for the
